One Touch Technologies began trading in 2006...

Company founder, Jacques Klopper, started the company in April 2006. The company name, 'One Touch Technologies' was used chosen for two reasons. 'One Touch' represents the power and flexibility of our automation systems. With one button press, a user is able to control and manipulate an infinite number of events and equipment. 'Technologies' represents our full range of services. One Touch supply, install and program all the different technologies involved in making the automation process possible.

About One Touch...

One Touch provides both hardware and software solutions. Our solutions simplify the way people interact with technology on a daily bases, both at work and at home. One Touch provides the highest quality solutions ensuring the finest attention to detail. Our cutting edge custom software solutions solve the complexity of managing this technology with reliable and consistent performance. Our solutions have been implemented in conference rooms, homes, places of education, hotels, entertainment venues, worship houses, among others.

Home Automation...

We are regarded as one of the best Home Automation companies in South Africa. AMX South Africa has recognised this achievement and we are proud to form part of their Professional Services division. One Touch Home Automation systems provide the users with the ability to control all the electronic components in their house. General examples include distributed audio and video, lighting, air conditioning, under floor heating, motorised blinds and curtains, security cameras and alarm systems, access control, gas fire places and many more. Not only can the users control these features from the highest quality touch screens located around the house, but also remotely via the internet and cell phone messaging.

Going Green...

One Touch Software Solutions ensure homes operate in an energy efficient environment at all times. Our software monitors user movement and usage patterns. This information allows the system to automatically enable and disable high energy usage equipment. Not only does this cut costs and help the environment, it also provides a luxurious and comfortable living environment. The system automatically adjusts features such as lighting and climate control without the user ever being aware.

Corporate Automation...

One Touch Corporate Automation systems provide businesses with the power and ability to execute smooth, professional conferences and meetings. Our systems remove all the complexities commonly found in today's boardrooms. User friendly touch screens allow the meeting coordinator to control motorised screens, projectors, lights, audio and video conferencing and many more features. Even the least technically inclined people are at ease and confident when using One Touch Corporate Automation systems.

Business At Hand...

With One Touch Corporate Automation, one button press will open your business to the world. One button press could automatically

- Turn on projectors (to the correct input and resolution)
- Drop motorised screens
- Enable and disable selected microphones
- Adjust the volume to optimum levels
- Adjust the lighting to optimum levels
- Set up video conferencing calls
- Dial remote site (London, New York, etc)
- Adjust camera angles
- and much more,

allowing businesses to focus on the business at hand in the most professional manner possible.

Vision...

Our vision has always and will always remain the same – to provide the most advanced solutions at competitive prices with the highest attention to detail.

Mission...

To continue providing industry topping solutions and services throughout South Africa and Africa.

Industry Experience...

Our clients include to date, both South Africa's largest and most advanced Residential AND Corporate automation projects. Our client portfolio includes:
